W2245 LMI Installation with Pressure Transducers

This is the most popular configuration for the W2245 system. For telescopic boom cranes with 360 degree load charts this is the most cost effective LMI system on the market. This is a true Load Moment Indicator (LMI) because it actually measures the load on the boom from the pressure sensors mounted on the lift cylinder. This style of system is accurate, reliable, low maintenance, and easy to use.
